It currently consists of 21 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Insert size: 144000; agarose-fp

COMMENT

misc\_feature

```
During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Ems. BMBL; Sw., SWISSPROT; Tr., TREMBL; Wp., WORMPEP; Information on the WORMPEP database can be found at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   shotgun may have been used to confirm this sequence. Sequence data from the whole genome shedgun alone has only been used where it has a phred quality of at least 30.
Mouse DNA sequence from clone RP23-384C22 on chromosome X, complete
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was mede to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC. Sequence from the Mouse Genome Sequencing Consortium whole genome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            http://www.sanger.ac.uk/Projects/C_elegans/wormpep RP23-384C22 is from the RPCI-23 Mouse PAC Library constructed by the group of Pieter de Jong. Submitted (20-NOV-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA ON NOV 20, 2002 this sequence version replaced gi:23195602.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.ngsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome table.

NOTE: This is a "working daraft' sequence. It currently consists of 1 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submittor. This sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Submitted (06-JUL-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, IX 77030, USA

Submitted (10-MXY-2003) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

On May 10, 2003 this sequence version replaced gi:23056451.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the facture table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence conly contigs will be indicated in the feature table.
                                                                                                                                                                                                                                                                        Submitted (02-UUL-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

Conterr project Information
Center project name: CH230-69F8
Center clone name: CH230-69F8
Center clone name: CH230-69F8
Consensus quality: 200303 bases at least Q40
Consensus quality: 200310 bases at least Q30
Consensus quality: 209370 bases at least Q20
Consensus quality: 209370 bases at least Q20
Consensus quality: 209370 bases at least Q20
Consensus quality: 209370 bases; sum-of-contigs estimation
Quality coverage: 6x in Q20 bases; sum-of-contigs estimation
       and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads both and indicated in the feature
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bom.tmc.edu/docs/Genbank draft_data.html).

NOTE: This is a 'working draft' sequence. It currently consists of 4 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

All repeats were identified using RepeatMasker: Smit, A.F.A. & Green, P. (1996-1997) http://ftp.genome.washington.edu/RM/RepeatMasker.html
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Center: Whitehead Institute/ MIT Center for Genome Research Center code: WIBR
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       consists of 36 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submittor.

This sequence will be replaced by the finished sequence as soon as it is available and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       NOTE: This is a 'working draft' sequence. Matzuk MM, Wang P;

WPI; 2000-350684/30. P-PSDB; AAY70948. 01-180, 01-184 and 01-236 polypeptides and nucleic acids encoding them, useful for evaluating potential contraceptives to block ovulation in a reversible manner.

Claim 2; Fig 1; 54pp; English.

The present sequence is the CDNA encoding the mouse occyte-specific protein Ol180, expressed in the occytes of primary (one-layer) preantral follicles through ovulation. It provides in vitro and in vivo reagents for studying ovarian development and function. This sequence has

1080 1079 1139

1199

```
New ovary-specific-genes comprising O1-180 or O1-236, useful for decreasing conception or enhancing fertility, or for the preparation of composition for treating e.g. cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               TCTTCATGACAGACAGTGTTACTTGGATATAAAGCCTGTGAATAAAAGGTATTGCAAACA

gynaecological and contraceptive activity. Agents which modulate 01-180, 01-184 and 01-236 may be used to treat cell proliferative or degenerative disorders, associated with abnormal expression of these ovary specific genes. This ovary-specific sequence can be used as reagents to evaluate potential contraceptives, to block ovulation in a reversible manner. It is also used to screen for genetic mutations in signalling pathways, that are associated with some forms of human infertility or gynaecological
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               420

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 g
                                       The present sequence is that of murine ovary-specific 01-180 cDNA obtained from a mouse ovary CDNA library. 01-180 clones were initially identified in a subtractive hybridisation screen using ovaries from Gdf9 knockout and wild-type mice. The 01-180 gene (see AB224590) on chromosome can be operated. The invention provides ovary-specific and ocyte-specific murine and human 01-180, 01-184 and 01-236 polynucleotides and copyedides. These genes and their protein products appear to relate to various cell proliferative or degenerative disorders, sepecially those involving ovarian tumours, such as germ line tumours and gramulosa cell rolliferation of a cell proliferative or degenerative or degenerative or degenerative of seconds. The invention crowdides a method for detection of a cell proliferative or degenerative disorder of the ovary, which is associated with the expression of 01-180, 01-184 or 01-236. It also provides a method for treating such disorders by using an agent which supersess or enhances the respective activities continues that the expression of of 1180, 01-184 or 01-256, and a method of screening for compounds that the expression of interact and/or modulate the expression or activity of the ovary-specific chance these compounds are presented and provides a method for the ovary specific chances.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                g
                                                                                           \delta
                                                                                                                                                                                                            ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence is that of the murine ovary-specific O1-180 gene on chromosome 5. O1-180 clones were initially identified in a cDNA subtractive hybridisation screening using ovaries from Gdf9 knockout mice and wild-type mice. O1-180 cDNA (see ABZ24589) was then used to isolate the O1-180 gene from a genomic library generated from mouse 1295vEv cre train. Loss of O1-180 results in female infertility and subfertility. The invention provides ovary-specific and ocyte-specific murine and human O1-180, O1-184 and O1-236 polymiclectides and polypeptides. These chann O1-180, O1-184 and O1-236 polymiclectides and polypeptides. These cream their protein products appear to relate to various cell convariant tumours, such as gream line tumours and granulosa cell tumours, or infertility, such as premature ovarian failure. The invention provides a method for detection of a cell proliferative or degenerative disorder of the ovary, which is associated with the expression of O1-180, O1-184 or O1-236. It also provides a method for treating such disorders by using and or ol-184 or O1-236. and a method of screening for compounds that interact and/or modulate the expression or activity of the ovary-specific genes. These compounds are possible contraceptive or fertility, enhancing agents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          .;

                                                                                                                                                                                                                                                                                                                                                                                                                                                ð
                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence is that of a pseudogene isolated during the cloning of novel murine ovary-specific gene Ol-180 (see AB224590). The major difference between the Ol-180 gene and pseudogene is a 13-nucleotide gap in exon 1 of the pseudogene, which is expected to cause a frameshift and early termination in exon 2 of the pseudogene. The sequences of exon 2 are dientical in the Ol-180 gene and pseudogene, and there are single bp mutations in exons 3 and 4. The invention provides ovary-specific and ocyte-specific murine and human Ol-180, Ol-184 and Ol-236 polynucleotides and polypeptides. These genes and their protein products appear to relate to various cell proliferative or despenatative disorders, especially those involving ovariant tumours, such as germ line tumours and galuxe. Disapnostic and therapeutic methods using the genes, polypeptides and modulator compounds are provided. Modulators also have contraceptive or fertility enhancing activities
                                                                                                                                                                                                                                                                                                                                                                      ø
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           122

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1206
                                                                                                                               polynucleotides and polypeptides. These genes and their protein products appear to relate to various cell proliferative or degenerative disorders, especially those involving ovarian tumours, such as germ line tumours and gramulosa cell tumours, or infertility, such as premature ovarian tailure. The invention provides a method for detection of a cell proliferative or degenerative disorder of the ovary, which is associated with the expression of 01-180, 01-184 or 01-236. It also provides a method for treating such disorders by using an agent which suppresses or enhances the respective activities of 01-180, 01-184 or 01-236, and a method of screening for compounds that interact and/or modulate the expression or activity of the ovary-specific genes. These compounds are possible contraceptive or fertility enhancing agents. The modulator is preferably a polypeptide, small molecule or polymucleotide sequence
                                                               polymucleotide. In mice, loss of O-180 is associated with female infertility and subfertility. The invention provides ovary-specific and occyte-specific murine and human O1-180, O1-184 and O1-236
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Antisense oligonucleotide; multiple target; antisense treatment; impaired respiration; inflammation; lung disease; pulmorary vasoconstriction; inflammation; allergic rhinitis; acute asthma; allergy; asthma; impeded respiration; respiratory distress syndrome; pain; cystic fibrosis; pulmorary hypertension; pulmonary vasoconstriction; emphysema; chronic obstructive pulmonary disease; leukemia; lymphoma; carcinoma; colon cancer; breast cancer; lung cancer; pancreatic cancer; hepatocellular carcinoma; kidney cancer; melanoma; hepatic metastasis;

The specification describes antisense oligonucleotides (AAX52869-X55271)

directed against at least 2 mRNAs selected from target genes, coding and

codons, genomic flanking regions, intron-exon borders, the 5'-end, the 3'

codons, genomic flanking regions, intron-exon borders, the 5'-end, the 3'

codons, genomic flanking regions, intron-exon borders, the 5'-end, the 3'

codons, genomic flanking regions, intron-exon borders, the 5'-end, the 3'

codons, genomic flanking regions, intron-exon borders, the 5'-end, the 3'

conditions or mixtures. The antisense oligonucleotides may be derived

from sequences AAX5512-74. These multiple target oligonucleotides

conditions or mixtures. Typical diseases and conditions are those

classess and conditions. Typical diseases and conditions are those

caspociated with impaired respiration and inflammation, including lung

diseases, pulmonary vasoconstriction, inflammation, allergic rhinitis,

catute asthma, allergies, asthma, impeded respiration, respiratory

distress syndrome, pain, cystic fibrosis, pulmonary hypertension,

culon cancer, breast cancers such as leukemias, lymphomas, carcinomas e.g.

colon cancer, breast cancers uning cancer, melanoma, hepatic metastases, as

colon cancer, breast which may metastasize or have metastasized

colon cancers with mixture and ancer, and ancer, melanoma, hepatic cancers as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     104997 GSNNNDNNBGGCCBGGGGGCGCCGGCCGGCCGSNNNDNNGGCCBGGGCGCCCCC 105056

```

The present invention relates to a method (M1) for identifying genes involved in plant resistance or response to pathogenic infection. M1 comprises identifying a gene whose expression is significantly altered in the incompatible interaction of plant gene expression relative to expression of the gene in an uninfected plant, in a mutant plant that does not express a gene associated with response to pathogenic infection, or in a corresponding incompatible or compatible interaction. (M1) is useful for conferring resistance to resistance or tolerance to a plant to bacterial, fungal or viral infection. The present sequence was used to

M1 comprises identifying a gene whose expression is significantly altered in the incompatible interaction of plant gene expression relative to expression of the gene in an uninfected plant, in a mutant plant that does not express a gene associated with response to pathogenic infection, or in a corresponding incompatible or compatible interaction. (M1) is useful for conferring resistance to resistance or tolerance to a plant to bacterial, fungal or viral infection. The present sequence was used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     196
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       526

The specification describes antisense oligomucleotides (AAX52869-X55271)

directed against at least 2 mRNAs selected from target genes, coding and
non-coding regions of RNAs corresponding to target genes, coding and
codons, genomic flanking regions, intron-exon borders, the 5'-end, the 3'
codons, genomic flanking regions, intron-exon borders, the 5'-end, the 3'
codons, mixtures. The antisense oligonucleotides may be derived
from sequences AAX55272-74. These multiple target oligonucleotides
conditions or mixtures. The nultiple target oligonucleotides
from sequences AAX55180-271) can be used for the antisense treatment of
diseases and conditions. Typical diseases and conditions are those
associated with impaired respiration and inflammation, including lung
